

## Booster Seat Fitting Station Certificate of Completion

Today, we measured \_\_\_\_\_ to see if he/she is ready to use a seat belt.

A child must be at least 145 cm (4'9") before he/she ***might*** be ready for a seat belt.

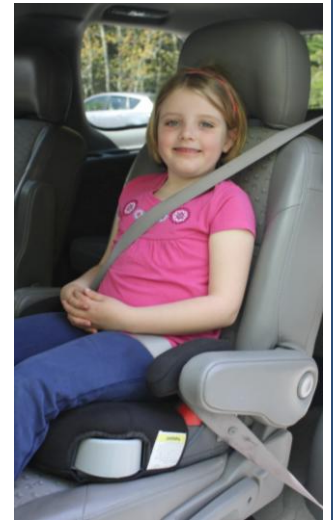

### Test Results:

- Your child's height is less than 145 cm (4'9"). Your child needs a booster seat.  
**Use a booster seat every time he or she rides in your car.**
- Your child is at least 145 cm (4'9"). Your child ***might*** be ready for a seat belt.  
**Take our simple test:**

Have your child put on the seat belt in your vehicle. Check to make sure that:

- ✓ The shoulder belt goes over the shoulder and across the middle of your child's chest. It should not touch the neck.
- ✓ The lap belt fits low over the hip bones, under your child's belly area.
- ✓ Your child's knees bend comfortably over the edge of the vehicle seat.

If the seat belt does not fit your child in this way, he or she should still be using a booster seat until the seat's height and weight limits have been exceeded. Children under 13 should sit in the back seat.
